

# Moustafa Ellithy

## Senior Frontend Engineer | Angular & React Architecture

Cairo, Egypt | +20 110 277 3322 | [mostafa.ellethy93@gmail.com](mailto:mostafa.ellethy93@gmail.com)  
[linkedin.com/in/mostafaellithy](https://linkedin.com/in/mostafaellithy) | [github.com/MostafaEllethy](https://github.com/MostafaEllethy)

### PROFESSIONAL SUMMARY

---

Senior Frontend Engineer with 7+ years designing and building production systems across enterprise SaaS, government, and freelance client platforms — spanning Angular/React component work to full-stack ownership on .NET and Node backends. Specializes in frontend platform work: building reusable systems and flexible service layers that other teams build on directly, plus monorepo tooling adopted across multiple teams. Comfortable owning a project end-to-end, from architecture and implementation through code review, release process, and production deployment.

### TECHNICAL SKILLS

---

**Languages:** JavaScript (ES6+), TypeScript, HTML5, CSS3/SASS

**Frameworks & Libraries:** Angular, React, Next.js, RxJS, Redux/Redux Toolkit (RTK Query), Tailwind CSS, MUI, Ant Design, Mantine UI, Storybook

**Architecture & Tooling:** Nx Monorepo, Turborepo, Private/Scoped NPM Registries, Design Systems, DI-Token & Ports-and-Adapters Architecture, TanStack Table, GitLab CI/CD, Docker, Webpack, Vite

**Testing & Quality:** Jest, Cypress, Playwright, React Testing Library, Accessibility (WCAG), Performance Optimization (Core Web Vitals, bundle-size reduction)

**Backend & APIs:** Node.js, NestJS, .NET Core, RESTful APIs, CQRS, NSwag, SignalR, Keycloak

**Leadership:** Code Review Standards, Scrum, Cross-Functional Collaboration, Technical Strategy

### PROFESSIONAL EXPERIENCE

---

#### Senior Frontend Engineer | GAMP

*Aug 2023 – Present*

- Solo-architected and built a 24-package publishable Angular component platform within an Nx monorepo, adopted by 3 production apps and 10+ engineers — cutting per-project CI pipeline time by ~10 minutes and sustaining 83% test coverage workspace-wide.
- Stopped backend changes from breaking internal component packages by redesigning how those packages connect to backend data (using reusable TypeScript contract patterns) — enabling safe, break-free reuse across 3 production apps.
- Rebuilt the shared data-table component to be easier to customize and maintain (using TanStack Table's flexible foundation), and merged four separate, overlapping form controls into one — cutting ~1,060 lines of code across 57 files. It remains the most widely-used component in the platform (36+ places import it).
- Built 5+ shared services (auth, translation, realtime, user preferences, maps) so each application could use its own version of each one without changing any feature code — using a reusable DI-token, ports-and-adapters pattern now used across 3 production apps.
- Made the app load noticeably faster by deferring a heavyweight third-party mapping library until it was actually needed, cutting 979 KB from the initial download — and applied the same code-splitting strategy across other routes and heavy components throughout the app.
- Held formal merge/release-approval authority and code-review ownership across the frontend: primary reviewer on 190+ merge requests across two of those codebases, personally executed 50% of all merges to the company's central starter-template repo, and authored the team's MR review template.
- Kept the multi-app monorepo ecosystem current on major Angular versions: led a solo Angular v21 upgrade (115+ files) and coordinated two earlier upgrades (v19→v20→v21) with a 4-developer team in ~2 days each, plus a repo-wide migration to Angular's newer zoneless model for faster, more predictable page updates.

## Engineering Officer | Ministry of Interior of Egypt

Jul 2017 – Aug 2023

- Led the design, development, and deployment of 7 full-stack internal government systems (ASP.NET Core/C#, Vue/React, EF Core, SQL Server), personally owning deployment on internal IIS/Windows infrastructure.
- Built a tool that helps call-center staff see roughly where a caller is located in real time, based on cell-tower coverage data — useful when an exact address isn't available. Delivered as a dedicated microservice (ASP.NET Core, SignalR) feeding a live map (React/ArcGIS).
- Built a new desktop notification app for ministry staff that keeps working without an internet connection and syncs automatically once reconnected — while integrating smoothly with two other existing systems (a backend service and an older legacy client) already in use.
- Rebuilt the system used to track custody of weapons and ammunition — covering about 15 different ways items can change hands (seizure, court evidence, disposal, and more), each with its own paperwork rules. Delivered across two backend rewrites plus the Vue frontend.
- Built a requisition and follow-up tracking tool spanning 8 requirement domains, with separate admin and field-facing portals, so police stations could submit and resolve resource requests end-to-end.

## FREELANCE PROJECTS

---

*Sole frontend developer, working directly with each client end-to-end, across all projects below.*

### VVIP — Membership & Loyalty Platform

*Stack: React 18, TypeScript, Vite, Turborepo, Mantine UI, Redux Toolkit*

- Built a two-app platform (member site plus admin panel) for a hospitality brand, including the UI/UX from scratch with no design spec provided.
- Built a system where new admin settings — like a text field, image, or number — automatically show up with the correct input in the admin panel, so adding a new setting doesn't require building a new screen from scratch each time. Used across 9 different areas of the site (homepage, footer, terms & conditions, and more).
- Delivered a bilingual (English/Arabic) product that let non-technical staff manage translations and site copy themselves, through a dedicated admin screen, instead of requiring a developer for every text change — plus a self-service membership join-request workflow with OTP-based login.

### ClinicR — Clinic Marketing & Booking Site

*Stack: Next.js, TypeScript, Tailwind CSS*

- Built two apps from scratch — a marketing site and a clinic booking-flow interface — with internationalized, RTL-aware layouts for Arabic support and client-branded UI across both.

### Tashera — Travel & Visa Services App

*Stack: React Native, Expo, React, Redux Toolkit, Ant Design*

- Delivered a contracted tourism and visa-services platform — a mobile app with push notifications and payment support, and a companion admin panel — covering 5+ service domains including visas, study-abroad, and tourism packages.
- Added system backup-and-restore tooling and other admin management features beyond the project's original contracted scope, on personal initiative.
- Set up Docker-based deployment for the admin panel.

## EDUCATION

---

### Bachelor of Computer Engineering

Alexandria Higher Institute of Engineering and Technology, Alexandria, Egypt — Jun 2016

## LANGUAGES

---

Arabic (Native) | English (Professional Working Proficiency)
